To whom it may concern

I hereby confirm that on March 19, 2013, the Director General of the Israeli Ministry of Health signed the guideline for the continuation of marketing and use of medical equipment registered at the non-renewable medical equipment booklet.

The Director General explained that there is no objection for importers/distributors who applied for license renewal, to continue to market their existing stock to the medical institutions as per their monthly requests, unless otherwise instructed by the manager in writing on the website of the Ministry, for the duration of two years, from the date of the expiry of registration license.

There is no objection to continue purchasing and using medical equipment as above by medical institutions and therapists. A medical institution can rely on presenting the previous registration license, enclosing the application approval for the renewal of the registration.

The above rules apply to medical equipment meeting the following criteria:

1. The equipment was registered and published at the official registration booklet;
2. Application to renew the registration was sent to the Medical Equipment Division at the Ministry of Health and accepted before the previous registration was expired;
3. The equipment was not subject to marketing termination and/or use and/or recall, and no warning has been published by the Ministry of Health and/or by health institutions abroad, and no guideline has been announced on the website of the Ministry of Health.

This directive took effect immediately, and was established at the Medical Device Department protocol.
